PERSONNAL PROJECTS

Afrikulture

- Afrikulture is a web application project I have been working on since February where African communities can share their cultural and artistic traditions, where travelers can discover hidden cultural gems and where culture enthusiasts can learn and contribute to the preservation of this heritage. In addition, this platform will highlight African sculptors and painters by presenting their works through publications and organizing virtual art exhibitions. I use React js and React Three Fiber for the front end, Express for the backend and postgresql for my database.

Stock Management

- Stock management application, I use React JS for the front end, Express for the backend and Mongo DB for the database.

Contact book

- Contact book entirely made in HTML, CSS and Javascript I worked on this project with two colleagues at Kadea.
